

# XM7 Rifle

## Next Generation Squad Weapons

**MISSION:** *The Next Generations Squad Weapon program will utilize a 6.8mm Rifle to replace the M4A1 Carbine currently employed by the Close Combat Force to fill a capability gap requiring increased energy on target at range to defeat current and emerging peer and near peer threats.*

- The XM7 is a modular, piston driven, select fire, magazine fed, fully suppressed 6.8mm rifle.
- The Rifle includes fully ambidextrous controls and improved ergonomics to enhance user operations, including a non-reciprocating left side charging handle, two position adjustable gas valve, collapsible / side folding buttstock, free-floating MLOK® handguard, match 2 stage trigger and full Picatinny Rail.
- The XM7 is designed to be suppressed and comes with a quick-detach suppressor optimized to the 6.8mm hybrid cartridge. The suppressor is a cylindrical body, mono-core design, optimized to deliver reduction in both sound and visible flash with a significant decrease in the flow of gases back to the operator.

**System Components:** Rifle with 7x 20 Round Steel Magazines, Suppressor, Flash Hider, Cleaning Kit, Suppressor Removal Tool, Combat Sling, Blank Firing Modification Kit, Removable Backup Iron Sights

**Vendor:** SIG Sauer, Newington New Hampshire
